SUMMARY

Full Stack Developer with 2 years of experience working with PHP, MySQL, JavaScript, REST APIs, and Postman. Experienced in building and maintaining web applications, including live client projects, a school website, and an e-commerce platform. Also skilled in Python, Excel, SQL, and Power BI for data analysis and visualization. Strong problem-solving skills with knowledge of database management, web technologies, and data visualization.

WORK EXPERIENCE

NewSoft Solutions Pvt. Ltd., *Full Stack Developer* 09/2024 – 09/2026 | Solapur, Maharashtra

- Worked for 2 years as a full stack developer, building forms, modules, and features for multiple live client projects using PHP, MySQL, JavaScript, jQuery, HTML, CSS, and Bootstrap.
- Designed responsive web pages and added interactive features like menus, forms, pop-ups, and client-side validation.
- Developed backend functions in PHP for data submission, form handling, and database operations, and managed MySQL databases for student and employee records.
- Created REST APIs in PHP for application features and tested them using Postman.
- Created admin panels and dashboards to manage and view data.
- Tested and debugged features, and worked with senior developers to improve the UI and performance.
- **Harit Dharashiv (MyTrees):** Worked on the volunteer application and admin management system for the Dharashiv district tree plantation drive on 15 August, which set a Guinness World Record.
- Developed the volunteer application with login and registration, where volunteers log in on plantation day, scan QR codes, and record the trees they plant.
- Built the admin management dashboard with volunteer records and a progress tracker to follow planting by site and volunteer.
- Developed the "Assign" feature, which lets the admin randomly assign sites to volunteers with one click.
- **Diet Shastra:** Worked on a diet and nutrition web application where users can register, log in, and buy diet packages directly from the app.
- Built a daily food delivery log so customers can track the meals delivered each day.
- Added features for users to manage their delivery addresses and check their appointments.

PROJECTS

HandCraft Store Website

- Built an e-commerce platform using PHP, MySQL, JavaScript, jQuery, HTML, CSS, and Bootstrap.
- Developed customer and admin modules with authentication.
- Implemented product catalog, shopping cart, order management, and order history features.
- Created a dynamic admin dashboard for managing products and customer orders.

Global English Medium School (GEMS) Website

- Developed and maintained a responsive school website using PHP, MySQL, HTML5, CSS3, JavaScript and Bootstrap 5.
- Built dynamic pages and an admin panel for managing website content.
- Implemented database-driven functionality, authentication, contact forms, and content management features.
- Focused on responsive UI, SEO, website security, and performance.
- Integrated modern UI effects and interactive components using JavaScript, AJAX, and GSAP.

Coffee Shop Sales Analysis

- Analyzed coffee shop sales data using MySQL and Power BI.
- Cleaned and prepared raw data in MySQL, and wrote SQL queries to calculate sales, orders, and growth trends.
- Analyzed sales by month, store location, product category, and weekdays vs. weekends.
- Built an interactive Power BI dashboard with KPIs, filters, and charts to present business insights.
